

Big Power in a Small Form Factor

DAYTON, OH (February 7, 2018) – Dayton Audio is excited to announce the release of the DTA-2.1BT 100W Class D Amplifier with Bluetooth. The DTA-2.1BT is a discrete whole system amplifier that provides output for two speakers and a passive subwoofer, which allows for a compact 2.1 setup in virtually any room whether it be an office, bedroom, or even a small home theater.

“We identified the need for a unique amp that not only powers stereo speakers, but also powers a subwoofer,” said Josh Wickersham, Product Line Manager. “Our customers love to build, now we’ve given them a simple way to power all their creations.”

The 2 x 50W output power is more than enough for most bookshelf speakers, and the subwoofer output of 100W is ideal for a small scale subwoofer. The reason the DTA-2.1BT is able to produce this exceptional power in such a small package is the Class D topology, which provides high-efficiency for a low power draw on your electrical system.

The DTA-2.1BT features the three most popular audio inputs: 3.5 mm, stereo RCA, and of course Bluetooth. The 3.5 mm and RCA inputs are found on the rear of the unit labeled Aux 1 and Aux 2, respectively. The Bluetooth connectivity is extremely convenient for wireless audio playback and is a key feature for any audio enthusiast.

The front plate of the DTA-2.1BT features 3 knobs providing a gentle tactile feel. The first knob on the left provides control over the subwoofer output. The second knob is a tone control, allowing you to customize the sonic signature of your speakers. The final (and largest) knob is the volume control located on the right of the faceplate. There is a discrete push button power switch/source selector located on the front of the unit on the left-hand side. The black aluminum case adheres to the Dayton Audio aesthetic of understated elegance, and can easily be the focal point of your 2.1 system.

About Dayton Audio

For more than 20 years, Dayton Audio has been a leading supplier for audio and video, combining real-world design with high-tech manufacturing techniques to offer some of the finest consumer electronic products today. Every Dayton Audio product is designed and engineered in the USA to provide the highest level of performance and value, backed by industry-leading warranties and support.
