

MA1240 Amplifier Makes Sound Distribution Seamless!

DAYTON, Ohio, March 31, 2010---- Imagine an amplifier custom designed for custom multi-room sound distribution with 12 channels in one convenient enclosure. Dayton Audio's MA1240 easily brings this vision to life with an intelligently engineered and versatile design that integrates easily into high-end whole house audio systems.

The MA1240 includes removable ears to make it easy to convert between rack-mount and tabletop configurations. Stable Class AB design delivers superior audiophile sound quality and performance. Each of the twelve channels has its own dedicated input and independent level adjustment to provide further flexibility. By simply flipping a single switch, two channels can be bridged to increase the total power output for that zone. This is helpful when extra power is needed in certain areas. The MA1240 allows you to bring high-end audio into every room of your home.

Dayton Audio has produced and distributed the finest, high-value loudspeaker drivers and speaker building accessories for over ten years. Each product is designed and engineered in the USA to deliver the highest level of performance and value. Audio enthusiasts rely on Dayton Audio to provide the best selection of speaker components for any project. Dayton Audio combines real-world design with high-tech manufacturing techniques. Dayton Audio products may be purchased through the following authorized retailer in the USA: Parts Express (parts-express.com). Visit us online at www.daytonaudio.com
